

GRADEMASTER

Grading on land or onboard ships

- Compact and reliable
- Size and batch sorting
- Available in marine version

KROMA

Master of fish processing

TECHNICAL DATA:

Capacity:
Up to 60 fish/minute

Operators:
Depending on layout

Supply:
3x400V+N+PE, 16A, 50Hz

Motor:
3x400V, 50Hz, 0.55kw

Water consumption:
Adjustable

Materials:
Stainless steel AISI 304

Finish:
Pickled

Weight:
From 300kg

Dimensions:
Depending on system

Options:
· Batch system
· Trap doors
· Label printer
· Filled box conveyor

GRADEMASTER

The GRADEMASTER is Kroma's grading system. The GRADEMASTER can be a small compact unit or it can have a number of chutes, making it ideal for your production setup.

The system can be delivered as a size-sorting unit and/or as a batch-sorting unit. There is a touch screen on the machine and you can design your different sorting programs from the touch screen.

The control has a large memory, capable of storing 99 different sorting programs.

- 1 The grader can be designed with trap doors to give you the most flexible grader possible. The size of the trap doors can be designed to your specifications.
- 2 It is possible to add a label printer solution to the grader. The label printer can be designed differently based on your requirements. The printer is always installed in housing so the lid can be closed for daily cleaning.
- 3 In a special version, the GRADEMASTER can be delivered as a marine version. The SW for the Marine grader solution is designed to withstand the weather and still be accurate.
